

**You can't predict
the price.**

**You can predict
the risk.**

A Journal of Finance strategy (Moreira-Muir, 2017),
rebuilt and stress-tested on 26 years of global markets.

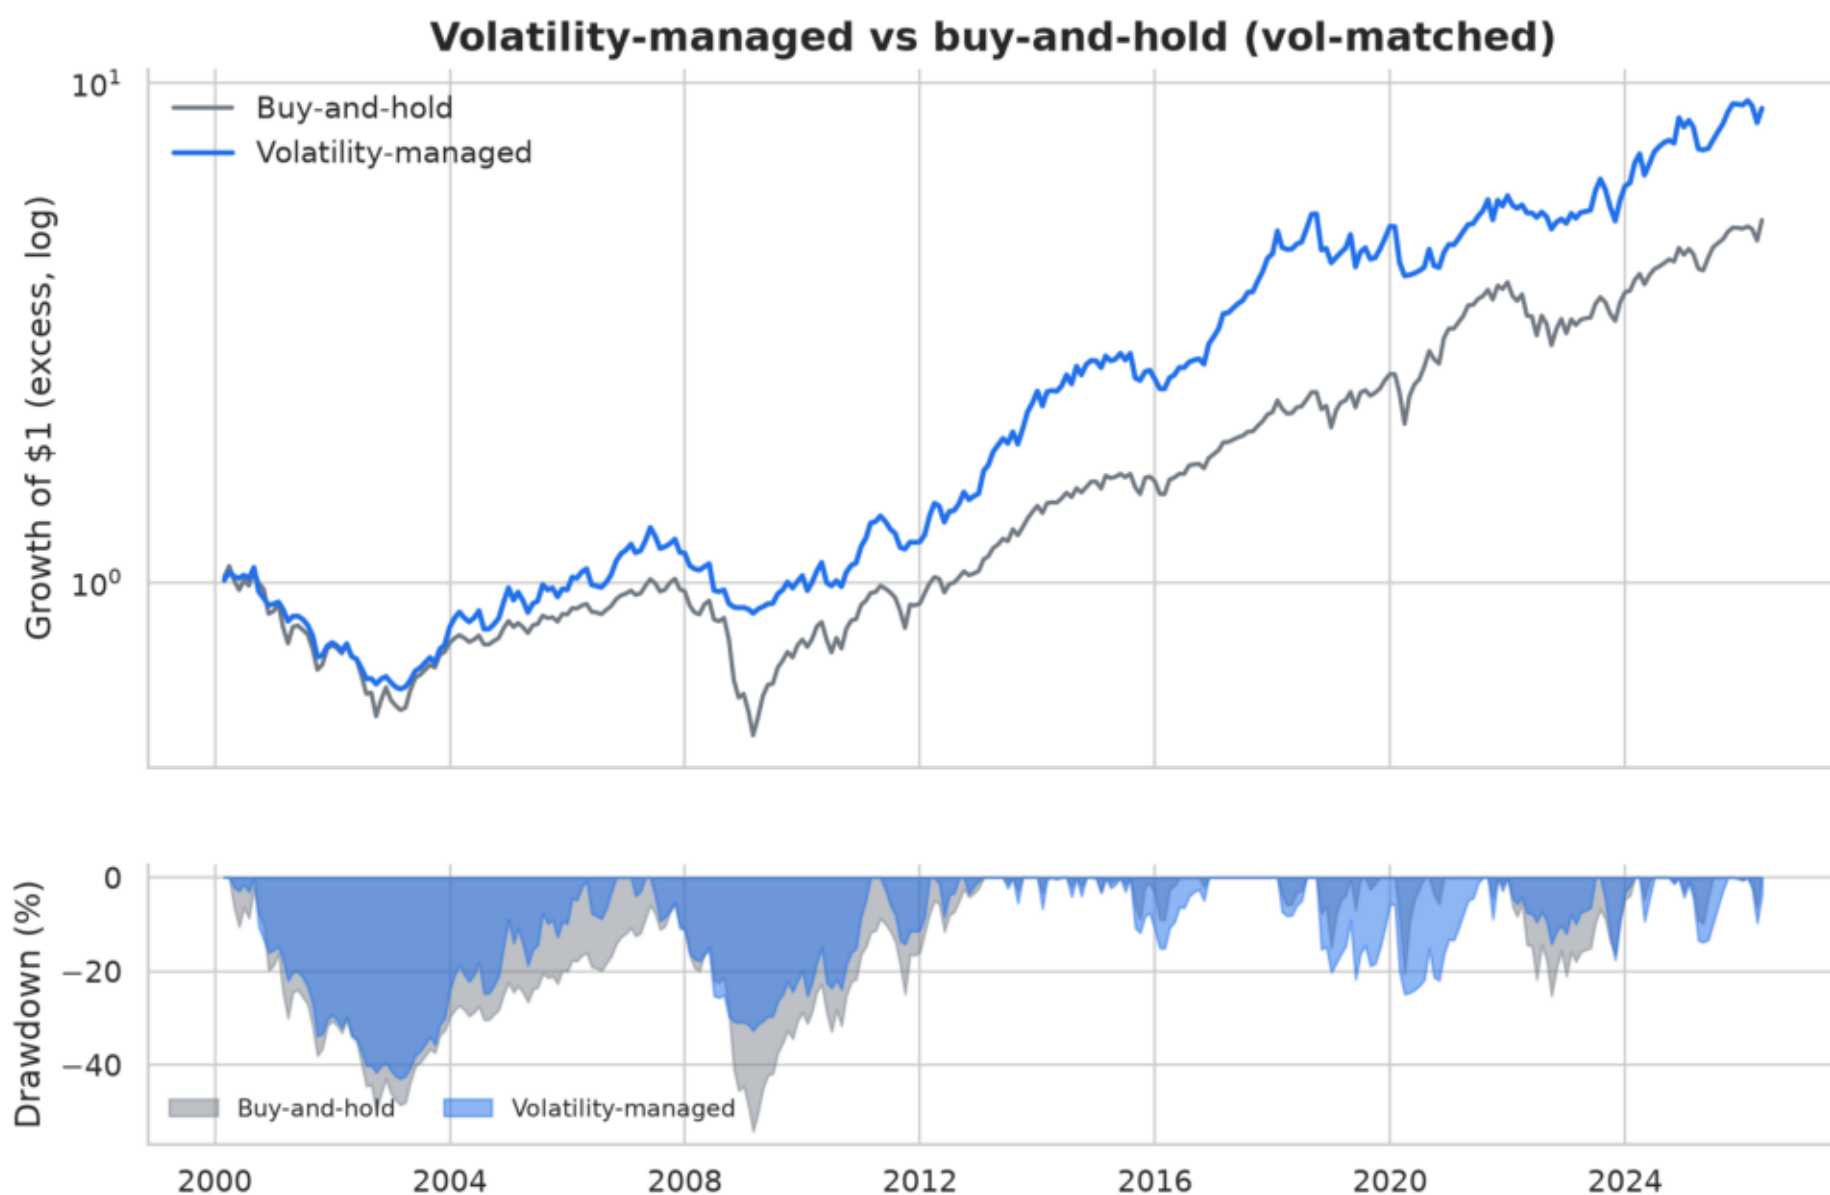

Sharpe 0.48 → 0.72 Drawdown halved $\alpha \ t = 3.6$

Forecasting returns fails. Forecasting volatility works.

02 · The result

Same risk as the market — higher return, smaller crashes.

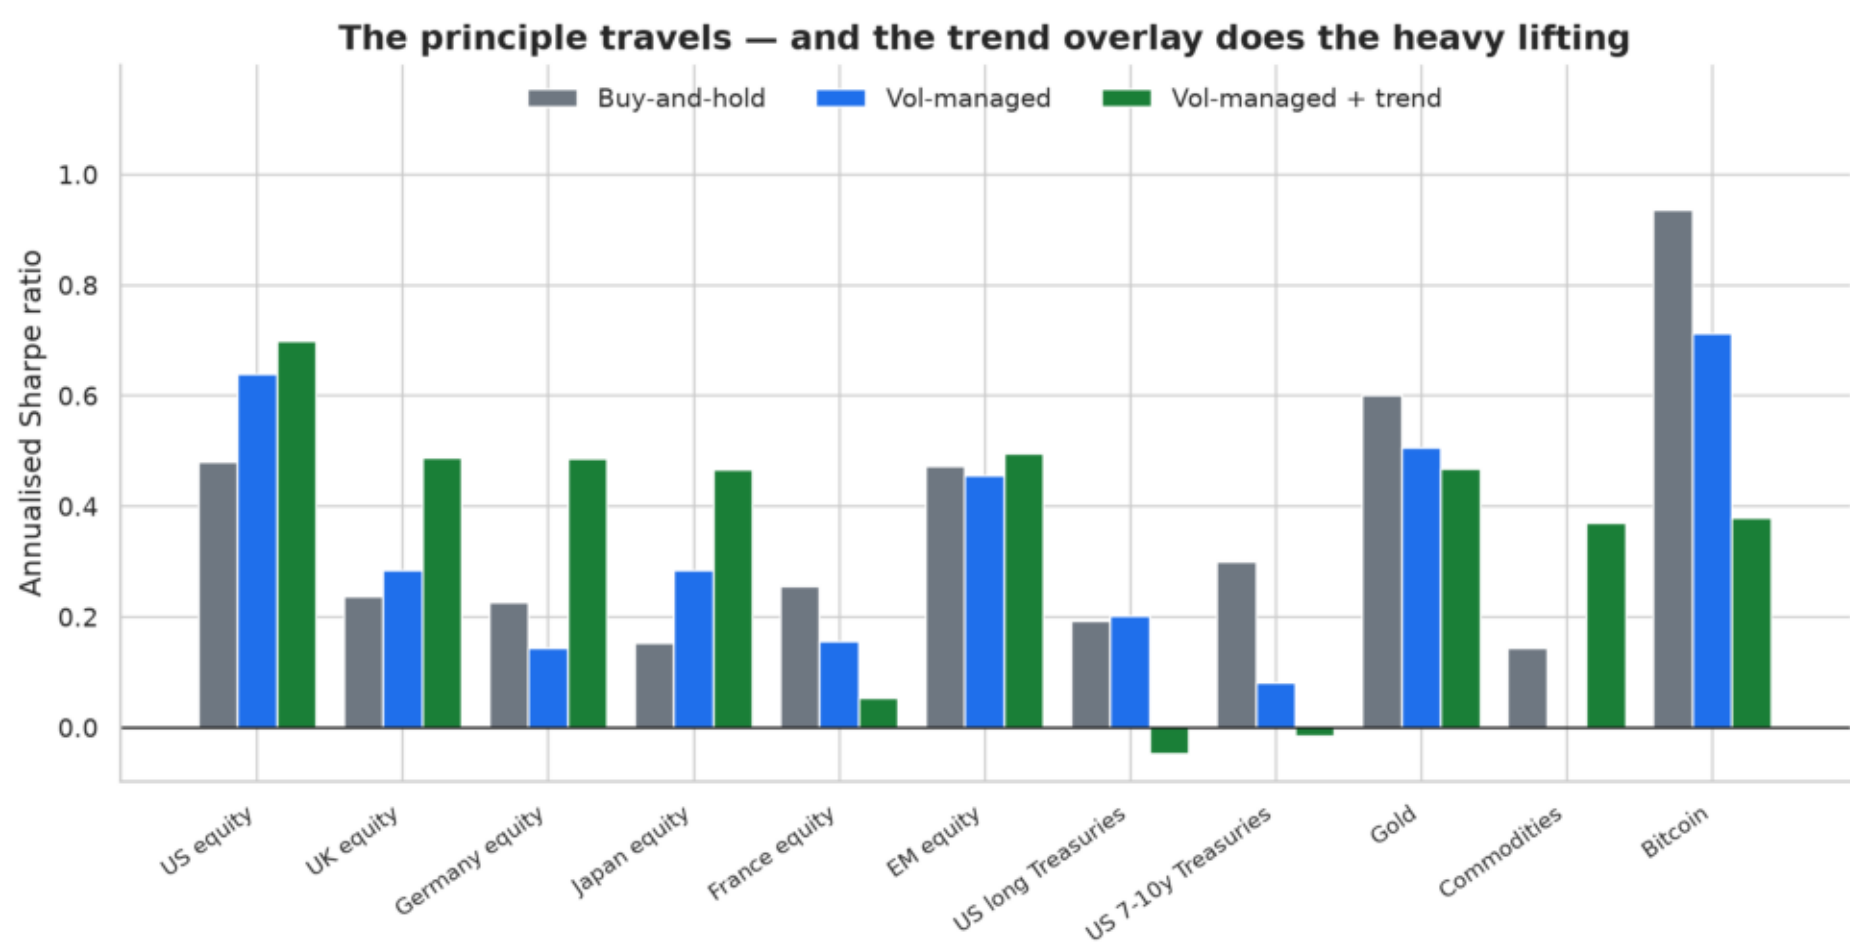

03 · It explains itself

**An algorithm rediscovered every crisis —
with no dates given.**

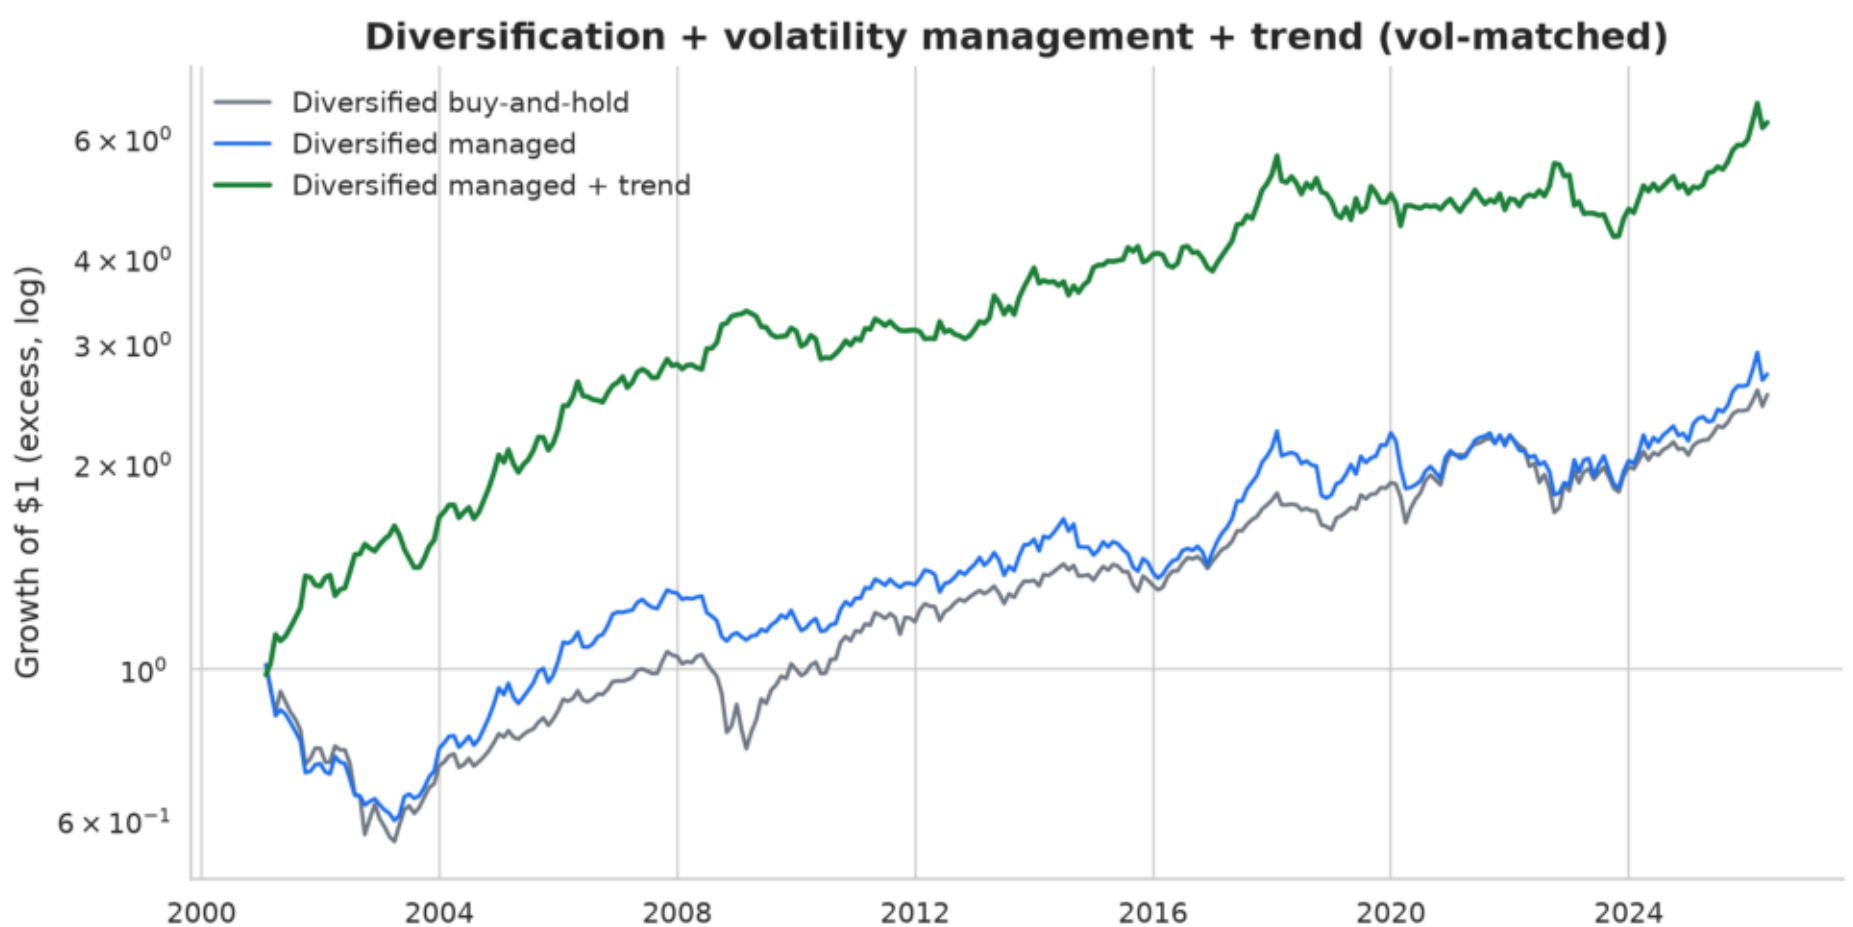

Across 11 markets: the trend overlay does the heavy lifting.

05 · The powerful part

**Diversify + manage risk + trend →
Sharpe 0.39 to 0.72.**
